

9.12 ENVIRONMENTAL MONITORING

Environmental monitoring, or evaluation monitoring, is required for all types of regulated units.

A facility must establish an evaluation monitoring program to monitor air, soil, pore gas, surface water, etc. (Title 22, Cal. Code of Regs., section 66264.700(c)).

This chapter will be further developed during the next maintenance cycle. See [Appendix A](#), Part VI of the Permit Completeness Checklist for more detail information on this chapter.
